Professional Summary

- .NET Full Stack Developer with 8+ years of experience building healthcare and enterprise web applications using C#, ASP.NET Core, .NET Core Web APIs, SQL Server, and modern JavaScript frameworks including React and Angular.
- Healthcare domain experience covering provider credentialing, eligibility, claims, and compliance workflows, including HL7 FHIR interoperability and HIPAA-compliant handling of protected health information.
- Strong C# and object-oriented design skills, applying SOLID principles and common design patterns across layered and microservice-based application architectures.
- Designs and builds ASP.NET Core Web API services and relational data models on SQL Server, along with the React and Angular front ends that consume them.
- Builds responsive single-page applications with React.js, Angular, TypeScript, Redux Toolkit, React Hooks, and reusable component libraries integrated with ASP.NET Core Web APIs.
- Deep SQL Server experience including complex T-SQL, stored procedures, CTEs, window functions, indexing strategy, and execution plan tuning on high-volume healthcare data.
- Hands-on with Azure App Services, Azure Functions, and Azure SQL, plus CI/CD automation through Azure DevOps and GitHub Actions with Docker-based deployments.
- Works end to end in Agile teams across requirements, design, development, code review, testing, deployment, and production support, with strong written and verbal communication.

Skill Summary

Programming Languages	C#, TypeScript, JavaScript (ES6+), T-SQL, PL/SQL, Python
Technologies	ASP.NET Core, .NET Core / .NET 6+, ASP.NET Core Web API, ASP.NET MVC, RESTful APIs, Microservices, Entity Framework Core, Dapper, LINQ, ADO.NET, WCF, JWT, OAuth 2.0, HL7 FHIR, HIPAA, Swagger/OpenAPI, Azure App Services, Azure Functions, Azure DevOps, GitHub Actions, Docker, Kubernetes, RabbitMQ
Frameworks & Libraries	React.js, Angular, Redux Toolkit, Context API, React Hooks, React Query, Axios, Next.js, Tailwind CSS, Material UI, Bootstrap, jQuery
Databases	SQL Server, Azure SQL, Oracle, PL/SQL, PostgreSQL, MySQL, MongoDB, IBM DB2
Markup/Scripting Languages	HTML5, CSS3, JSON, XML, YAML
Version Control Tools	Git, GitHub, Azure Repos, GitLab, Bitbucket, TFS, SVN
Reporting Tools	Power BI, SQL Server Reporting Services (SSRS), Crystal Reports
Development Methodologies	Agile/Scrum, SAFe Agile, DevOps, CI/CD, Waterfall

Educational Qualification

- Master of Science in Computer Science – University of Texas at Arlington, Dec 2023
- Bachelor of Engineering in Computer Science – BMS Institute of Technology, India, Jun 2019

Professional Experience

Client: Elevance Health (Cognizant Contract)
Senior .NET Full Stack Developer

Jan 2023 – Present

Elevance Health is one of the largest health benefits organizations in the US. I work on a group of internal healthcare applications supporting provider credentialing, eligibility, claims, and compliance operations, built on C#, ASP.NET Core, SQL Server, and React and hosted on Azure.

Responsibilities:

- Develop and maintain healthcare applications using C#, ASP.NET Core, and .NET Core Web APIs supporting provider credentialing, eligibility, and compliance operations.
- Build ASP.NET Core Web API endpoints using layered service and repository patterns, dependency injection, model validation, and Swagger documentation for internal and downstream consumers.
- Build responsive React.js front ends with TypeScript, React Hooks, Redux Toolkit, and Tailwind CSS, and maintain the Angular modules still in use on older screens.
- Design API contracts and data models supporting HL7 FHIR (R4) resources and JSON/XML exchange between internal healthcare systems.
- Write and tune complex T-SQL in SQL Server including joins, CTEs, window functions, stored procedures, and indexes, using execution plan analysis to resolve performance issues on high-volume claims and provider tables.
- Model SQL Server schemas, keys, and constraints for provider, credentialing, and eligibility data, and manage schema changes through versioned migration scripts.
- Develop event-driven microservices using RabbitMQ for asynchronous processing, message routing, and retry handling across distributed .NET Core services.
- Secure Web APIs and React workflows using JWT and OAuth 2.0, following HIPAA requirements and enterprise standards for handling protected health information.
- Deploy .NET Core and React applications to Azure App Services and Azure SQL, containerizing components with Docker and managing releases through Azure DevOps pipelines.
- Maintain Oracle PL/SQL stored procedures, functions, and triggers on legacy healthcare interfaces that feed the SQL Server platform.
- Write unit and integration tests for C# services and Web API endpoints, and take part in peer code reviews to keep the codebase maintainable.
- Participate across the full SDLC from refinement and design through development, testing, deployment, and production support, working directly with business analysts and clinical operations stakeholders.
- Work in a two-week Agile cadence with daily standups, sprint planning, pull request reviews, and coordinated releases across the React front end and .NET Core services.

Environment: .NET Core, .NET 6, C#, ASP.NET Core, ASP.NET Core Web API, ASP.NET MVC, React.js, Angular, TypeScript, Redux Toolkit, Tailwind CSS, SQL Server, Azure SQL, Oracle, PL/SQL, Entity Framework Core, Dapper, HL7 FHIR, JWT, OAuth 2.0, RabbitMQ, Docker, Kubernetes, Azure App Services, Azure Functions, Azure DevOps, GitHub Actions, Git, Swagger, Jira

Client: Infogain
Senior Software Engineer

Jul 2021 – Nov 2021

Infogain provides digital engineering services to enterprise clients. On this engagement I worked on a healthcare payer web platform, building ASP.NET Core Web API services and React front ends used by member services and provider network teams.

Responsibilities:

- Developed full-stack features using C#, ASP.NET Core Web API, SQL Server, and React.js with TypeScript, working across both the service and UI layers.
- Built and maintained RESTful Web APIs exposing member, provider, and claims data to internal applications and partner systems, documented with Swagger.
- Built reusable React components with hooks, Redux Toolkit, and Tailwind CSS, and maintained existing Angular screens during the migration to React.
- Implemented role-based rendering in the UI backed by claims-based authorization in the ASP.NET Core Web API layer.
- Wrote complex T-SQL queries, stored procedures, and views in SQL Server, and tuned indexes to improve response times on reporting screens.
- Used Entity Framework Core and Dapper for data access, choosing between them based on query complexity and performance requirements.
- Applied secure coding practices aligned to OWASP guidance, including input validation, parameterized queries, authentication controls, and secure secrets handling.
- Troubleshoot UI defects, Web API errors, SQL performance problems, and deployment failures across lower and production environments.
- Participated in the full SDLC and Agile/Scrum ceremonies, contributed to code reviews, and used Jira and Git for tracking and version control.

Environment:

Visual Studio 2019, .NET Core 3.1/5, C#, ASP.NET Core MVC, ASP.NET Core Web API, React.js, Angular, TypeScript, Redux Toolkit, Tailwind CSS, JavaScript, HTML5, CSS3, Entity Framework Core, Dapper, SQL Server 2016/2019, Oracle, PL/SQL, MongoDB, IIS, Swagger, Git, Azure Repos, Jira

Client: Revoseven Technologies
Application Developer

Jun 2017 – Jul 2021

Revoseven Technologies, working with end client Volvo Group on truck infotainment and fleet management systems, covering digital dashboard screens, backend REST APIs for vehicle and telemetry data, and truck inventory management.

Responsibilities:

- Developed backend REST APIs in C# and ASP.NET Web API to serve vehicle, telemetry, and dashboard data to in-cab infotainment units and mobile clients.
- Built web front ends for fleet and inventory screens using ASP.NET MVC, JavaScript, and jQuery, later rebuilding key modules in React.js and TypeScript.
- Implemented truck inventory management workflows covering vehicle records, configuration options, dealer allocation, and status tracking.
- Wrote and optimized SQL Server, Oracle, and MySQL queries, stored procedures, and indexes to handle high-volume vehicle and telemetry data.
- Used Entity Framework and ADO.NET for data access across SQL Server and Oracle databases.
- Integrated Google Maps APIs for vehicle location, route display, and geofencing features used by fleet operators.
- Handled authentication and authorization for APIs and web modules, including token-based access for mobile clients.
- Debugged production issues using application logs, browser dev tools, and Visual Studio, and supported releases with unit testing and smoke testing in lower environments.

- Participated in Agile ceremonies and release coordination, using Git and TFS for version control and Jira for defect tracking.

Environment: Visual Studio 2015/2017, .NET Framework 4.5/4.6, .NET Core 2.1, C#, ASP.NET MVC, ASP.NET Web API, WCF, ADO.NET, Entity Framework, React.js, JavaScript, jQuery, HTML5, CSS3, Bootstrap, Google Maps API, SQL Server 2014, Oracle, MySQL, Jenkins, IIS, Git, TFS, Jira
